

Microcell Service Agreement with E911

E911 Service

911 calls placed over your 3G MicroCell will send the address you provide in your online registration to the emergency response center responsible for sending first responders (i.e. police, medical assistance or fire) to your location. If you use your 3G MicroCell at a location different than the address you provided at registration, **FIRST RESPONDERS DELAYS ARE LIKELY**; therefore, you **MUST** keep the address on your 3G MicroCell account up to date. If you move your 3G MicroCell to a new location, update your address information immediately. Visit att.com/3GMicroCell and go to "Manage your 3G MicroCell".

Only 911 calls placed while connected to the 3G MicroCell will send the address you provided to First Responders. 911 calls placed while not connected to your 3G MicroCell will route based upon how the wireless network determines your location. Your 3G MicroCell needs electrical power and internet service to work. If a failure happens, all calls placed including 911 will **NOT** be connected through your 3G MicroCell.

3G MicroCell can only be used at an Authorized Location

You can only use your 3G MicroCell where AT&T is authorized to provide wireless service. Additionally, 3G MicroCell operation may be limited to specific places within our network coverage area. See your AT&T representative for specific information on service availability.

The address where the 3G MicroCell is physically located will be verified via the online registration process prior to use. If AT&T is unable to verify that the physical address of the device is located within an AT&T authorized service area, the 3G MicroCell will not remain in service.

Terms and Conditions

This device is sold for use on AT&T systems, not compatible with other wireless systems. To take advantage of all the benefits and service features, you may need to purchase additional hardware or software, pay monthly access and/or per use charges. Broadband internet access service required to operate AT&T 3G MicroCell™, internet access service and usage generated by 3G MicroCell are subject to applicable charges from your ISP. Normal charges apply for mobility data plans and features when using the AT&T 3G MicroCell. The maximum coverage of the AT&T 3G Micro Cell™ is approximately 5000 square feet. Actual coverage will be limited by the density of obstructions. Device may not support all location based wireless services, or video share services. Device must be operated in a location AT&T is authorized to provide wireless service. AT&T authorized areas are labeled best, good, moderate, or partner on the AT&T coverage viewer located at att.com/wireless.att.com/coverageviewer. Device may not function except in specific counties in a phased network roll-out. AT&T reserves the right to restrict national network deployment. See your AT&T representative for specific availability.

Minimum \$39.99 post paid wireless voice plan from AT&T required to enroll in optional unlimited talk feature (AT&T Unlimited MicroCell Calling) available for additional monthly charge. AT&T Unlimited MicroCell Calling talk feature includes inbound anytime minutes and outbound anytime minute domestic calls made to the 50 United States, Puerto Rico, U.S. Virgin Islands, Guam and Northern Mariana Islands.
